

Filip Zdelar

Title: Software Engineer

Experience: 8+ years

Country: Serbia

Status: Open to work

EXPERIENCE

Full-Stack Software Engineer

TIAC · 12/2023 - 11/2026

Developing fintech web solutions as part of an external development team for FIS. Full-stack development position.

Key Projects:

- Ambit RISK: Monolithic application focused on migrating existing desktop functionality to a modern web-based solution.
- Prophet: Microservice-based platform involving AI chatbot development, modeling, and workspace-related microservices.

Technologies: Angular, .NET, MSSQL, AWS

Full-Stack Software Engineer

Panonit · 3/2017 - 4/2022

Significant projects were:

1. Auto Solver: Web application for auto-scheduling manager's schedule and optimizing the result. The position has required full-stack technologies, an understanding of the cloud, and high mathematics. Developed a solver that was only 5% slower than the best one available in the market. However, the solution provided has over 40% higher-quality results on average. Technologies: .NET, MSSQL
2. Cropsit: Developing a web application to detect anomalies in plants using deep neural networks to create a custom image classifier. Technologies: Python, Pytorch
3. Developing a web application with a focus on training models for object segmentation and including APIs for speech-to-text and text-to-speech functionality. Technologies: Python, Pytorch

Backend Software Engineer

Continental · 4/2022 - 3/2023

The developer played an integral role in establishing autonomous communication between vehicles and remote servers (Ramsas 1.5 project). Technologies: .NET, C++, MongoDB

Three core components:

1. Designed and implemented a custom nonrelational database.
2. Managed asynchrony transactions between two components on the 4th level of the OSI mode.
3. Establishing and maintaining secure connections between vehicles and remote servers.

AI Researcher

Codolis · 4/2022 - 9/2022

Building custom deep neural networks for the classification and synthesis of one-dimensional medical ECG signals, in order to automate recognition of heart anomalies. The goal was to increase the size of the dataset for the classification, by synthesizing more data, by adjusting state-of-the-art models. Technologies: Python, Pytorch

Backend Software Engineer

Independent Project - Client Acquisition · 3/2023 - 7/2023

Developed and deployed a web booking application for a client in Croatia. Tehnologies: Python, Django, AWS, Postgres, Docker

- Implemented AWS SaaS architecture, optimizing resource utilization and ensuring scalability.
- Developed and integrated backend solutions to connect with external APIs and databases.

SKILLS

Backend:

- Main: .NET, C#, MSSQL, PosgreSQL
- Others: Python, MongoDB, Java, C++

Frontend:

- Main: Angular, Type Script, Java Script

Cloud:

- Main: Azure, AWS, Docker

Artificial intelligence:

- Main: PyTorch, Claude Code, Cursor

Other skills: Git, Scrum, Agile, CI/CD, Jenkins, Clean code

EDUCATION

Master of Electrical and Computer Engineering

Average grade of 9.50 out of 10

Bachelor of Electrical and Computer Engineering with honors

Average grade of 9.69 out of 10

High School

Special mathematics program for gifted students, Grammar school "Jovan Jovanović Zmaj", Novi Sad, Serbia.

COURSES

Calude 101, Calude Code 101, AL FLuency: Framework & Fondations, Building with the Calude API
